FINAL BUILDING 771 PHASE 1 UNDER BUILDING CONTAMINATION CHARACTERIZATION SAMPLING REPORT

Enclosed are eight copies of the final Building 771 Phase 1 Under Building Contamination Characterization Sampling Report. This report documents the results of the preliminary (Phase 1) characterization of potential under building contamination near the inside perimeter of Building 771. These analytical results will initially be used to assist Building 771 in developing the building demolition strategy. The data will also be used in support of future building characterization and remediation activities planned in 2003.

The recommended distribution of this report is two copies for EPA, two copies for the CDPHE, and four copies for DOE. If you have any questions, please call me at extension 5245 or Tracey Spence at extension 4322.
